water makers

**Desalination.
Renewable Powered.**

Water. Challenge of the century.

Water scarcity is rapidly increasing.

Already today, 4 billion people are affected by water shortages. Water is part of everything we do; the food we eat, the energy we consume and the products we use. By using more water than we receive, our aquifers, rivers and lakes are disappearing. Water shortages result in pressure on the supply of food and production of goods, leading to migration and possible conflict. With an increasing population and climate change accelerating water scarcity, water to me is the biggest challenge for humanity in the 21st century.

As a water expert and cleantech specialist, it's my mission to be part of a sustainable solution for water scarcity. I believe it's possible to move from scarcity to abundance by implementing proven solutions with a positive, long-term impact.

MSc. Sid Vollebregt, Managing Director

Desalination using Earth's abundant resources.

How can water be scarce if 70% of the Earth's surface is covered by water? With only a small fraction fresh water and even a smaller fraction accessible for consumption, the key to water access lies in the sea. Desalination is the obvious solution, with reverse osmosis as the preferred technology. However, this industry is energy and fossil intensive, resulting in high expenses. Conventional desalination accounts for 1% of the global electricity consumption, contributing to the acceleration of water scarcity by its emissions.

The obvious solution is desalination powered by renewable energy. However, this involves the challenge to couple a constant reverse osmosis process to fluctuating solar, wind or wave energy. This barrier resulted in high water expenses and limited water quality in the past. Enter Elemental Water Makers, providing solutions since 2012 to ensure affordable, high-quality fresh water, using unlimited resources. Join us in solving fresh water scarcity, using only the sea, sun, earth & wind.

MSc. Reinoud Feenstra, Technical Director

Securing fresh water today.

Without limiting tomorrow.

We do reverse osmosis. Without the downsides.

Powered by nature with wind, solar, wave or your energy.

Reverse osmosis has been used for decades to provide drinking water from seawater. We provide efficient reverse osmosis technology powered by the sunshine, the wind, the waves or your energy.

Desalination without the huge energy bills.

Reverse osmosis can be quite energy intensive, leading to high operational expenses. We enable affordable water by realizing energy efficient solutions powered by renewable energy sources available on-site.

A nightmare to maintain and operate? Not anymore.

Membrane fouling, rusty components, an empty water storage in the morning, these worries are in the past. Through constant operation and automated fresh flushes, the membrane lifetime is maximized. All components in contact with salt water have been carefully selected to resist corrosive environments and have a minimum of maintenance. Operation becomes stress-free through remote monitoring, control and automation.

Save up to 70% on water expenses

Enjoy big savings by avoiding the use of electricity, attractive return on investment.

Reliable & independent water supply

Independent on the availability and price of electricity, with a reliable water supply throughout the year.

Sustainable using unlimited resources

Utilizing the abundant resources of the sea and sun. Avoiding emissions as no fossil fuels are involved.

Stress-free operation & remote monitoring

You can check-in on your water supply, anywhere, anytime. No more surprises thanks to automated messages.

Water for all.

Numerous applications. Ready to quench your thirst.

Water is a part of everything we do. Reliable access to high-quality water is crucial for any resort, community, private development, municipality, government or industry.

Utility expenses of a resort can be quite significant. The utility companies charge high water rates to resorts. A private desalination solution contributes heavily to the electricity bills. What if the water supply could become good for your wallet and for the Earth?

Today, 1 in 9 people lack access to safe water. Women are disproportionately affected, as they are often responsible for collecting water. It's also a matter of health; every 90 seconds a child dies from a water-related disease. What if we can improve health and enable empowerment & education? It's time to break the cycle of poverty for communities.

Municipalities or utility companies are responsible for the water supply. Efficient desalination technology lowers the operational expenses and opens the door to decrease the region's water tariffs. Decentralized water supply avoids transportation losses, unwanted tapping or sending trucks. It's possible to realize sustainability and water goals through desalination by renewable energy.

Water is the passion of island owners and the playfield for architects and developers. It's an essential part of the stunning vistas and key to privacy. But it also creates an expensive sustainability issue. Cutting electric cost entirely and using remote monitoring, fresh water is delivered without concerns. Fresh water has never been so easily obtainable or this free of guilt.

**When it comes
to water quality**

**no one can afford
to compromise.**

Up to 1200 m³/day. Only 1.30 \$/m³.
Up to 4.5M gallon/day. Only 0.5 ¢\$/gallon.

Elevation available?
Let gravity do the work.

- Uses gravity assisted storage
- Solar energy Reverse Osmosis
- Lowest water expenses
- Makes use of natural elevation
- 24/7 water production
- Reduced brine salinity

No elevation?
Battery-powered solution.

- Uses battery storage
- Solar energy Reverse Osmosis
- No need for elevation
- Grid-tied version possible
- Water production during the day
- Containerized, plug and play

Energy source available?
Efficient water maker.

- Uses your energy supply
- Electric Reverse Osmosis
- 3x more efficient vs ref. RO
- Generator or (mini) grid
- 24/7 water production
- Compact or containerized

A proud tradition of water engineering.

The Dutch are well known for their water skills. Water is in their genes, with a history that revolves around water adaptation. Bring in the Dutch!

Using gravity.

Elevation available? Let gravity do the work.

We turn seawater or brackish water into affordable fresh water, 24 hours a day, without the use of expensive energy. Our off-grid solution directly uses solar, wind or wave energy to fill a buffer tank on a hill with seawater. Through the force of gravity, the reverse osmosis process receives its required feed: pressurized seawater. We make sure the water buffer always contains water to enable constant water production, resulting in lowest cost of water. The waste energy of the reverse osmosis process is re-used to reduce the required elevation with 80% to 90 m or 290 ft for seawater.

The buffer tank can be easily constructed using a corrugated, galvanized, coated steel tank with liner that is suitable for corrosive environments. A concrete cistern or basin are suitable alternatives.

We use the forces of nature at its best for an independent guilt-free water supply. By avoiding energy conversion losses, batteries & frequent maintenance, savings up to 70% can be realized. The bigger, the better, as water cost come down with size of production. Sizes start small and go up to millions of liters per day.

Footprint indication	10 m ³ /day 2,640 gallon/day	100 m ³ /day 26,400 gallon/day	1,000 m ³ /day 264,000 gallon/day
Solar panels m ² (ft ²)	64 m ² (690 ft ²)	640 m ² (6,900 ft ²)	6,400 m ² (69,000 ft ²)
Desalination unit m ² (ft ²)	7 m ² (75 ft ²)	25 m ² (270 ft ²)	150 m ² (1,615 ft ²)
Elevated buffer m ³ (US gallon)	100 m ³ (26,410 gal)	1,000 m ³ (264,100 gal)	10,000 m ³ (2,641,000 gal)
Buffer diameter m (ft), h = 3 m	6,5 m (21 ft)	20,6 m (68 ft)	65,1 m (214 ft)

"For years, me and my family struggled with high electricity bills. Now we enjoy guilt free water at lower costs. I would recommend Elemental Water Makers without hesitation."

Example case: gravity.

A resort cutting water expenses.

The problem

The resort receives its piped water from the island public utility company and faces a commercial rate of 5 \$/m³. With a consumption of 50 m³/day, the water expenses weigh heavily on the resort's operational expenses. Some days, there is no water available and some days, the quality doesn't meet the high resort's standards.

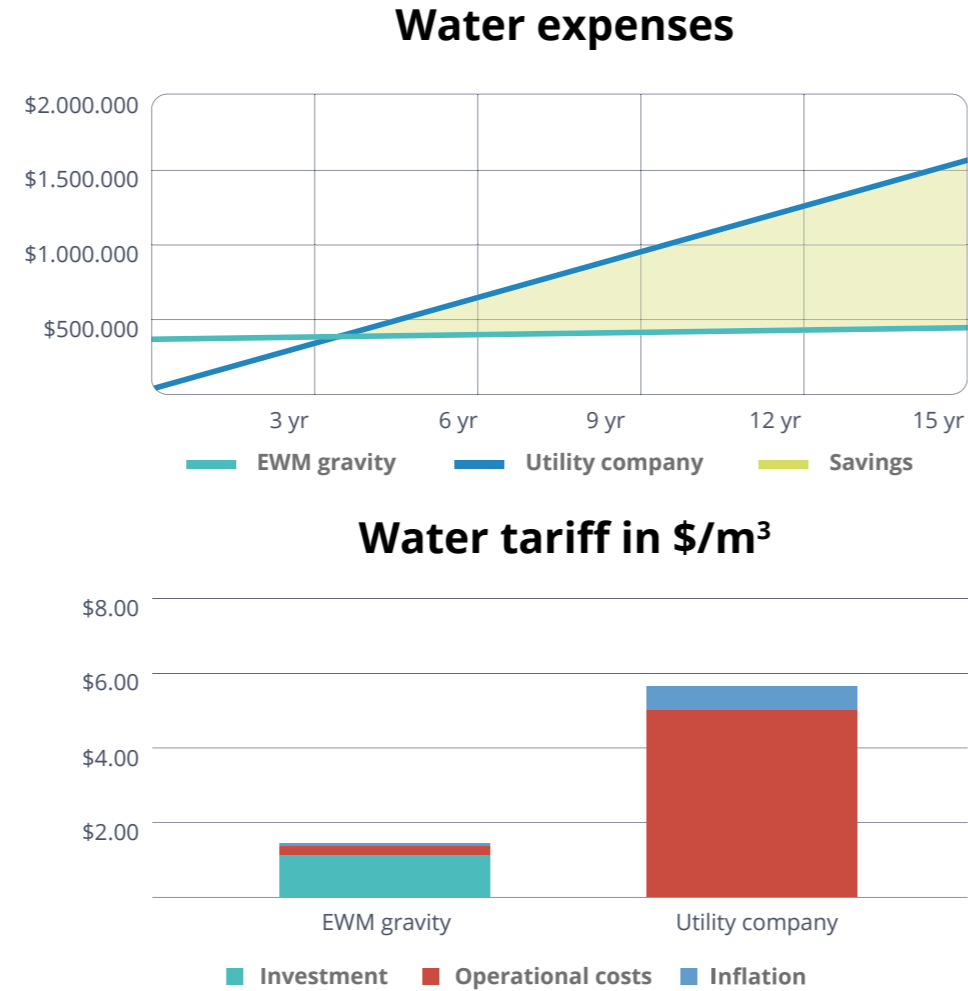

The solution

Enter Elemental Water Makers. Through investing in the Gravity-assisted solution, 70% savings on the water expenses will be enjoyed, resulting in over 1.100.000 \$. The solution's payback is within 4 years.

The benefits

Besides these financial savings, the resort has become independent on the availability and price of energy, provide high-quality water to their guest, save 100 ton CO₂ per year, enjoys stress-free operation & remote monitoring and offer their clients a sustainable experience.

Assumptions: costs including installation and training | Yearly inflation of 2% | Local water price is 5 \$/m³ | Water intake available | Financial lifetime 15 yrs | Technical lifetime >20 yrs | OpEx include consumables, spare parts and membrane replacement.

Over \$1.000.000
in total savings.

Using batteries.

No elevation? Use a battery-powered solution.

To enjoy a reliable independent water supply at any location, we have a solution that works everywhere. Combined state-of-the-art solar panels and battery technology allows efficient reverse osmosis, while minimizing battery size. The batteries used require no maintenance, are suitable for warm climates and enjoy a long lifetime.

This plug & play off-grid solution is containerized to be commissioned in a matter of days. The solar panels are placed on top of the container. As alternative, all components can be integrated at preferred locations, to avoid impact on existing infrastructure and limit the footprint. The high efficiency reverse osmosis is equipped with remote monitoring for control and designed for simple operation. All components are purpose built to survive corrosive environments and ensure a long life-time.

The production capacity can be doubled using a hybrid version, that runs on solar energy during the day and uses an existing energy supply during the night to reduce the payback time even more. The solution is available from a few m³ up to millions of liters of potable water per day.

Philippines.

Water kiosk using solar-grid hybrid solution.

"There are four major issues in the provision of potable drinking water in Southeast Asia: water cost, quality, access, and environmental impact. Working with EWM technology we are able to invest locally into decentralized water production solutions that overcome each of these challenges. Starting in the Philippines, regions where we operate can now enjoy affordable high-quality water that has been produced using a sustainable method, in line with our vision."

Example case: batteries.

A community with access to safe and affordable water.

The problem

The community relies on water that is trucked in on a daily basis. The results is a questionable quality upon delivery and a high water tariff of 6 \$/m³. Lacking an alternative, the people are forced to spend a majority of their limited income on water, without the assurance of good quality and sufficient availability.

The solution

This changes completely when a decentralized solution of Elemental Water Makers is put in place. It's a battery based desalination unit which can be operated to produce 5 m³/d fully solar energy driven off- grid. There is also the option to produce 11 m³/day in hybrid mode making use of grid or generator power during the night. The solution allows the people to enjoy savings on the water expenses of 75% and total savings of over 300.000 \$. The solution's payback is 2.5 years.

The benefits

The community now has high-quality potable water on-site, without the dependency of water trucking and associated carbon emissions, saving 10 ton CO₂ per year. The solution leads to empowerment, jobs and possibilities for education.

Assumptions: costs including installation and training | Yearly inflation of 2% | Trucked water price: 6 \$/m³ | Local electricity price: 0.3 \$/kWh | Water intake available | Financial lifetime 15 yrs | Technical lifetime >20 yrs | OpEx include consumables, spare parts and membrane replacement.

Over \$300.000
in total savings.

Using your energy.

Energy available? [Get our efficient water maker.](#)

We understand that water and energy are not always considered at the same time. If you already enjoy renewable energy or currently have an affordable energy solution in place, we can hook you up with an energy efficient desalination solution that's easy to operate and maintain.

Especially for small-scale solutions, energy efficiency is often lacking. To avoid high electricity bills, our efficient reverse osmosis units operate around 2.2 kWh/m³ or 8.3 kWh/1,000 gallons energy consumption for seawater. Industry standard solutions can consume over 3x more energy.

The compact & user-friendly units are designed for corrosive environments and the energy recovery device is maintenance free. GSM monitoring is available for remote control and an automated fresh flush system is included. Sizes start small and go up to large capacities. The units are available in different voltages, phases and frequencies to meet the local power supply.

Footprint indication	4,8 m ³ /day 1,268 gallon/day	11 m ³ /day 2,906 gallon/day	400 m ³ /day 105,680 gallon/day
SEC kWh/m ³ (kWh/kgal)	3,5 kWh/m ³ (13.3 kWh/kgal)	2,2 kWh/m ³ (8.3 kWh/kgal)	2,2 kWh/m ³ (8.3 kWh/kgal)
Nominal power kW	0,7	1,0	36,7
Weight kg (lb)	44 kg (97 lb)	90 kg (198 lb)	Varies per solution
Size l x w x h in m (inch)	0,7 x 0,4 x 0,4 m (29 x 16 x 16 inch)	1,2 x 0,5 x 0,4 (47 x 20 x 16 inch)	40 ft container

Lanzarote.

Eco resort using renewable energy.

"A special thanks to Elemental Water Makers who joined forces with Lanzarote Retreats to achieve their sustainability goals. The Dutch team made it possible for our eco-village to become independent on water. We are naturally powering the desalination unit by harnessing the wind & sun. I hope Elemental Water Makers will continue to encourage the rest of the world to do the same."

18 t/yr
CO₂ savings

Example case: water maker.

A private island enjoying guilt-free water.

The problem

The private island has a water demand of 9 m³/day due to landscaping and private use. The rain is not reliable and sufficient enough, leaving no alternative for desalination. Two options are available, which first appears to be an easy decision as the standard reverse osmosis solution is about 30% cheaper in purchase price.

The solution

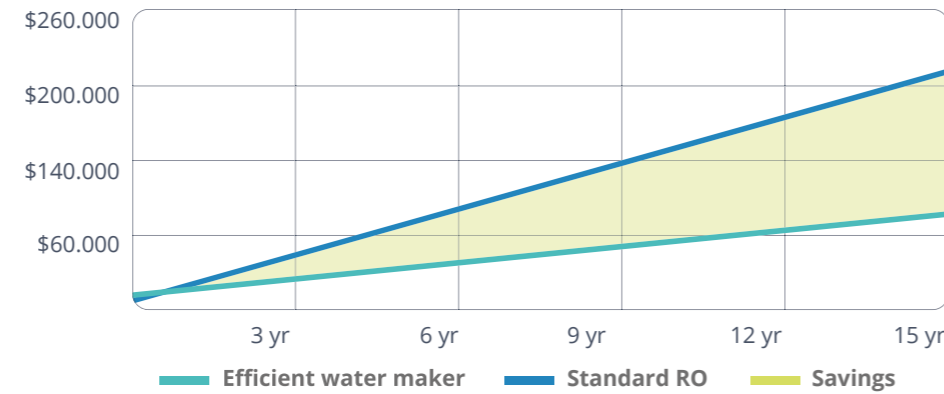

Luckily, the energy efficiency is considered before making a decision. By choosing the 3x more efficient water maker offered by Elemental Water Makers, water savings of 55% are realised, equal to 112.000 \$. Despite the 30% higher purchase price the payback is still less than 1 year, as energy generation on the island is expensive with 0.3 \$/kWh.

The benefits

The compact desalination solution allows the private island owner to enjoy high-quality water on-site, with stress-free operation & remote monitoring, whilst still saving 18 ton CO₂ per year. This is a solution for future generations.

Assumptions: costs including installation and training | Yearly inflation of 2% | Reference RO energy consumption: 10 kWh/m³ | Water intake available | Financial lifetime 15 yrs | Technical lifetime >20 yrs | OpEx include consumables, spare parts and membrane replacement.

A close-up photograph of a young girl with dark skin and hair, wearing a small gold earring and a red string bracelet. She is leaning forward, drinking water from a public tap. Her hands are cupped under the running water. The background is a soft-focus green, suggesting an outdoor setting. The image is framed by a white border.

The security of clean water is priceless.

Yet we make it really affordable.

Real time. Peace of mind.

Just water. No worries.

An empty water storage; a troublesome surprise. Such experiences will be a thing of the past using our real-time monitoring solutions. You can check-in on your water supply, anywhere, anytime.

Good for the Earth. Good for your budget.

Securing fresh water today, without limiting tomorrow.

We believe that reducing expenses will always play an important role in the decision making and therefore strive to provide the most cost attractive renewable energy driven desalination solutions for fresh water production. At the same time, we want to deliver a long-term sustainable solution for the water supply. Therefore we provide solutions that utilize renewable energy sources. We also understand that offering a care-free fresh water supply is important, while providing an outstanding level of service and reliability.

The foundation that powers change.

We work together with the Elemental Water Foundation that has the goal to enable safe and affordable fresh water on a global scale through projects that provide water using desalination driven by renewable energy for people that face water scarcity. The Foundation aims to provide and finance water systems for people who need it most.

Join us.

Work with us. Benefit from unlimited resources.

Water is not an exact science, it's almost an art. Add energy to the equation and two completely different fields of expertise are required to merge, without causing a short-circuit. Without proper pre-filtration, the membranes will quickly have to be replaced. Without the correct energy supply, the motors won't be able to turn. As a system integrator with patented technology, this is where we thrive, creating tailored solutions to fit your needs.

Free and non-binding offer

Using rough assumptions we quickly estimate your potential savings and payback time and provide you with a free offer to discuss.

Professional installation

Through close collaboration and clear communication, the water supply solution will be up and running in no-time.
