

Elevator Pitch to Solar Impulse Foundation

There is a New Technology for Heating and Cooling of Buildings that Reduces Energy Costs by 36% and Capital Costs by 27%. By making use of Heat Pump Chillers for Cooling and Air-to-Water Heat Pumps for Heating this New Technology can provide an all-electric system which uses only renewable energy. Funding is being sought to commercialize this new technology and develop channels into the market.

The two founders are MIT graduate engineers who have invested \$200,000 of their own funds.
