

INSENS

DIGITAL & EFFICIENT SHOWER

INMAN, pioneering a new tomorrow

How can we best manage water, one of our most precious resources? With INSENS, taking a shower becomes an eco-conscious, sensory experience. The specially-designed showerhead offers a soft, all-body spray, while our advanced technology helps you reduce your environmental impact and play your part in restoring the health of our planet.

INSENS
EXPERIENCE THE LUXURY
OF ENHANCED WELL-BEING

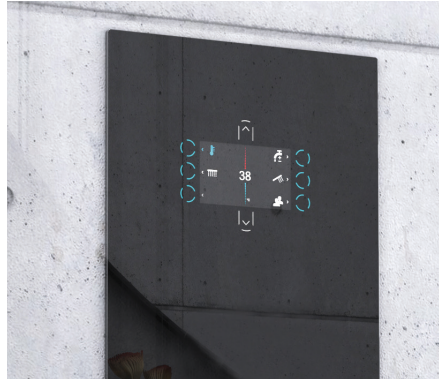

INSENS

Activating your senses

INSENS, the first electronic mixer for an eco-friendly shower

INSENS exclusive, patented technology gives you hot water right from the start. Cold water is recovered before it comes out the showerhead and mixed without heating to give you the temperature you like and a feeling of unique well-being, without any waste.

The ShowerPad, a touch-operated, intuitive interface with proximity sensors

All the features are operated by watertight touch-sensitive buttons. A 5-inch LCD screen displays the settings, which can be adjusted to your preferences. When you step away from the shower, water flow is reduced or stops, helping you cut your consumption by up to 70% without even realizing it.

The Hydrobox smart control

This is the brain behind INSENS technology, controlling water flow and temperature. Its compact design means it can be recessed into the wall, fitted directly within the shower system, under the bathtub or housed within its own box.

All INSENS products are Made in France
