DIGITALIZING THE PHOTOVOLTAIC INDUSTRY

[Click to watch our Pitch](#)

Today, there are +773 GW

=

**2000 MILLIONS of PV MODULES
at WW level on Photovoltaic renewable
energy**

The PROBLEM

WHERE are the defective modules?

Utility scale

Commercial & Industrial

Distributed Residential

Photovoltaic installations come in all sizes and shapes, but they have one thing in common, they should be maintained. BUT PV modules do not provide any information about their status or performance.

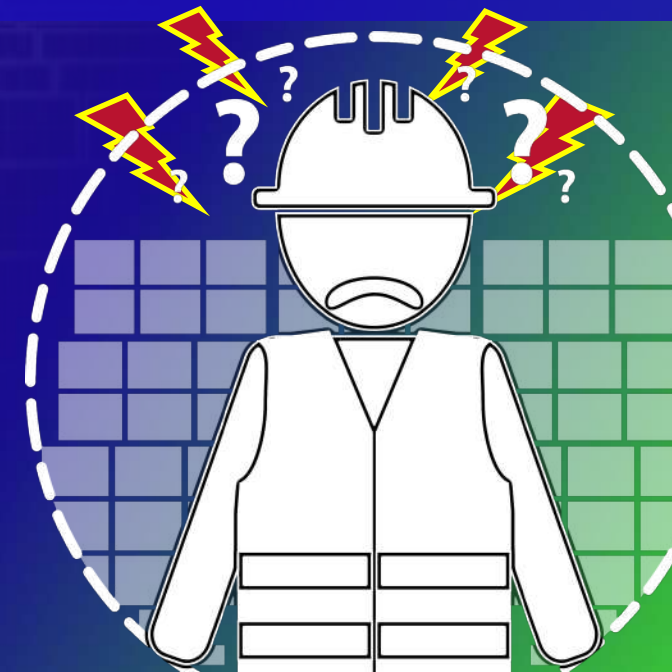

That's why, to really know if a PV module is working properly, we must check them **MANUALLY ONE BY ONE**.

Which are the defective modules?

2000 MILLIONS of MODULES

1 min per each = 3805 year reviewing PV modules

If we DEDICATE just 1 min to each of them it would takes us 3805 years to review them all.
Maintain a PV plan requires to manually connecting a measuring device to each module and check it, by putting yourself at risk of electric shock, thermal shock (working at more than 60°C Celsius) or risks of fall in case of installations in altitude.

PV Plants needs to be efficiently maintained in order to provide the maximum Clean Energy production.

All modules needs to be diagnosed and taken care of efficiently to have Cleaner Cities and a Better Planet.

Our Purpose is to digitalize the
Photovoltaic Industry
to achieve Sustainable
Safer Energy for all contributing
to a better Planet for everyone

HOW? With your Phone!

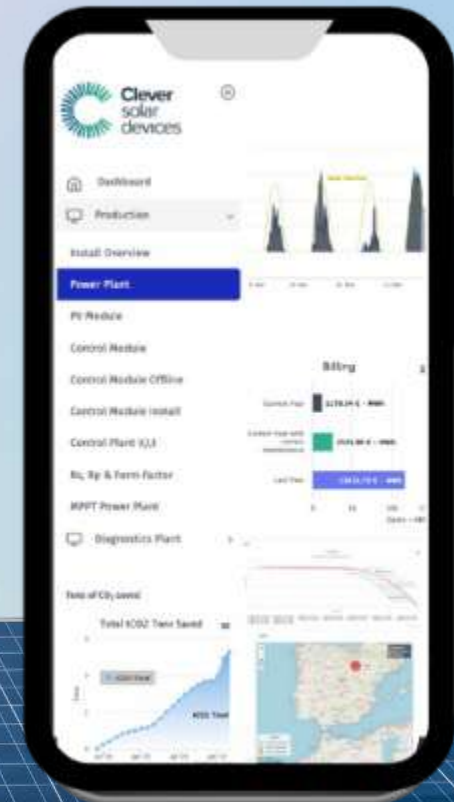

WELCOME TO PHOTOVOLTAICS 4.0

Introducing **Clever Dx**,
the **Intelligent Digital Twin** for
Photovoltaic Solar Plants.

A cutting-edge technology
designed to **enable remote
diagnosis** of photovoltaic
solar plants.

Detect **any issue** in **real-time**,
provides an **efficiency
diagnosis**, improves
production and **reduces costs**,
and **aids in business
decisions** based on accurate
data.

Patented small plug-n-play device placed behind each module that sends automatically to the cloud the diagnosis information and **Artificial Intelligence and Deep learning** make the work for you.

Simplified and comprehensive information, reports, alarms and maps for you know exactly

WHAT is going on and the most important WHERE EXACTLY are the problems in the installation.

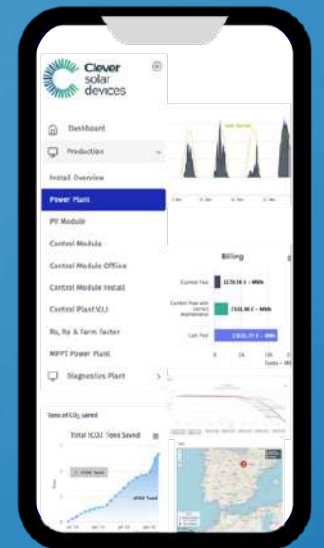

Patented HW

CLOUD COMPUTING
SCADA

Accurate data

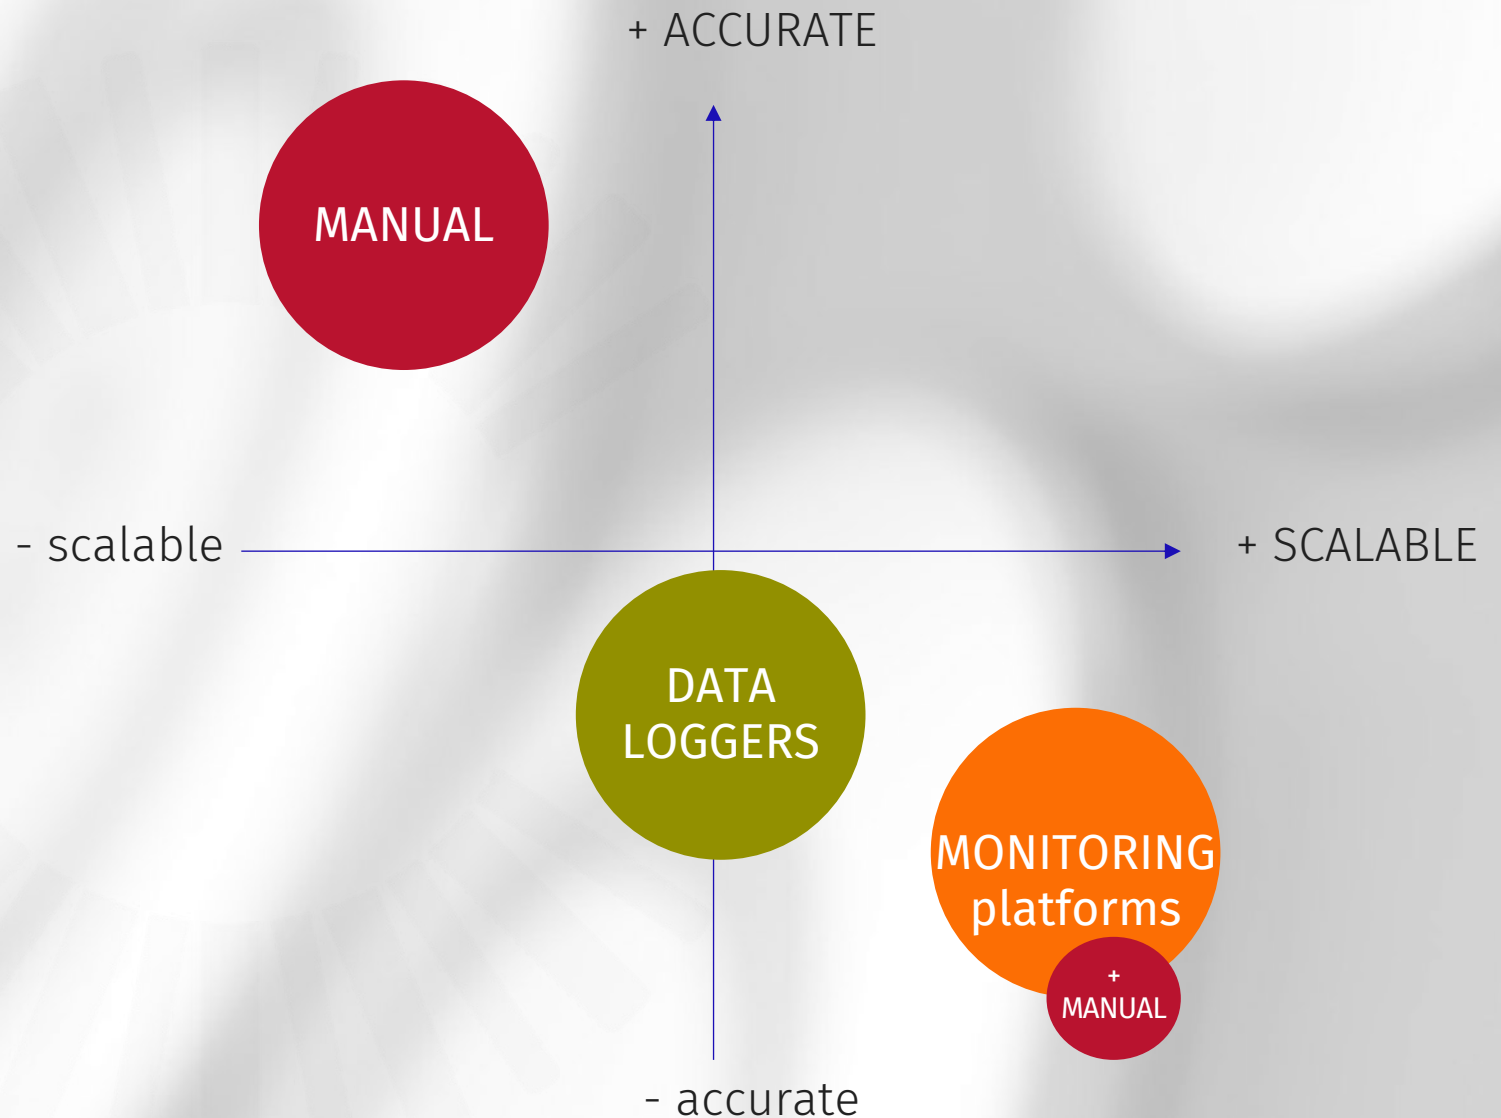

AI
Deep Learning

Competition

Monitoring platforms are growing players in the market but **only summarizes** the production information delivering insufficient data for diagnosis: just an estimation that should be complemented with **Manual procedures**.

Manual checks imply labor risks (electrical and thermal shock and falls), it's also **time consuming and expensive**, therefore, usually only 5% of the installation is **reviewed periodically** twice a year.

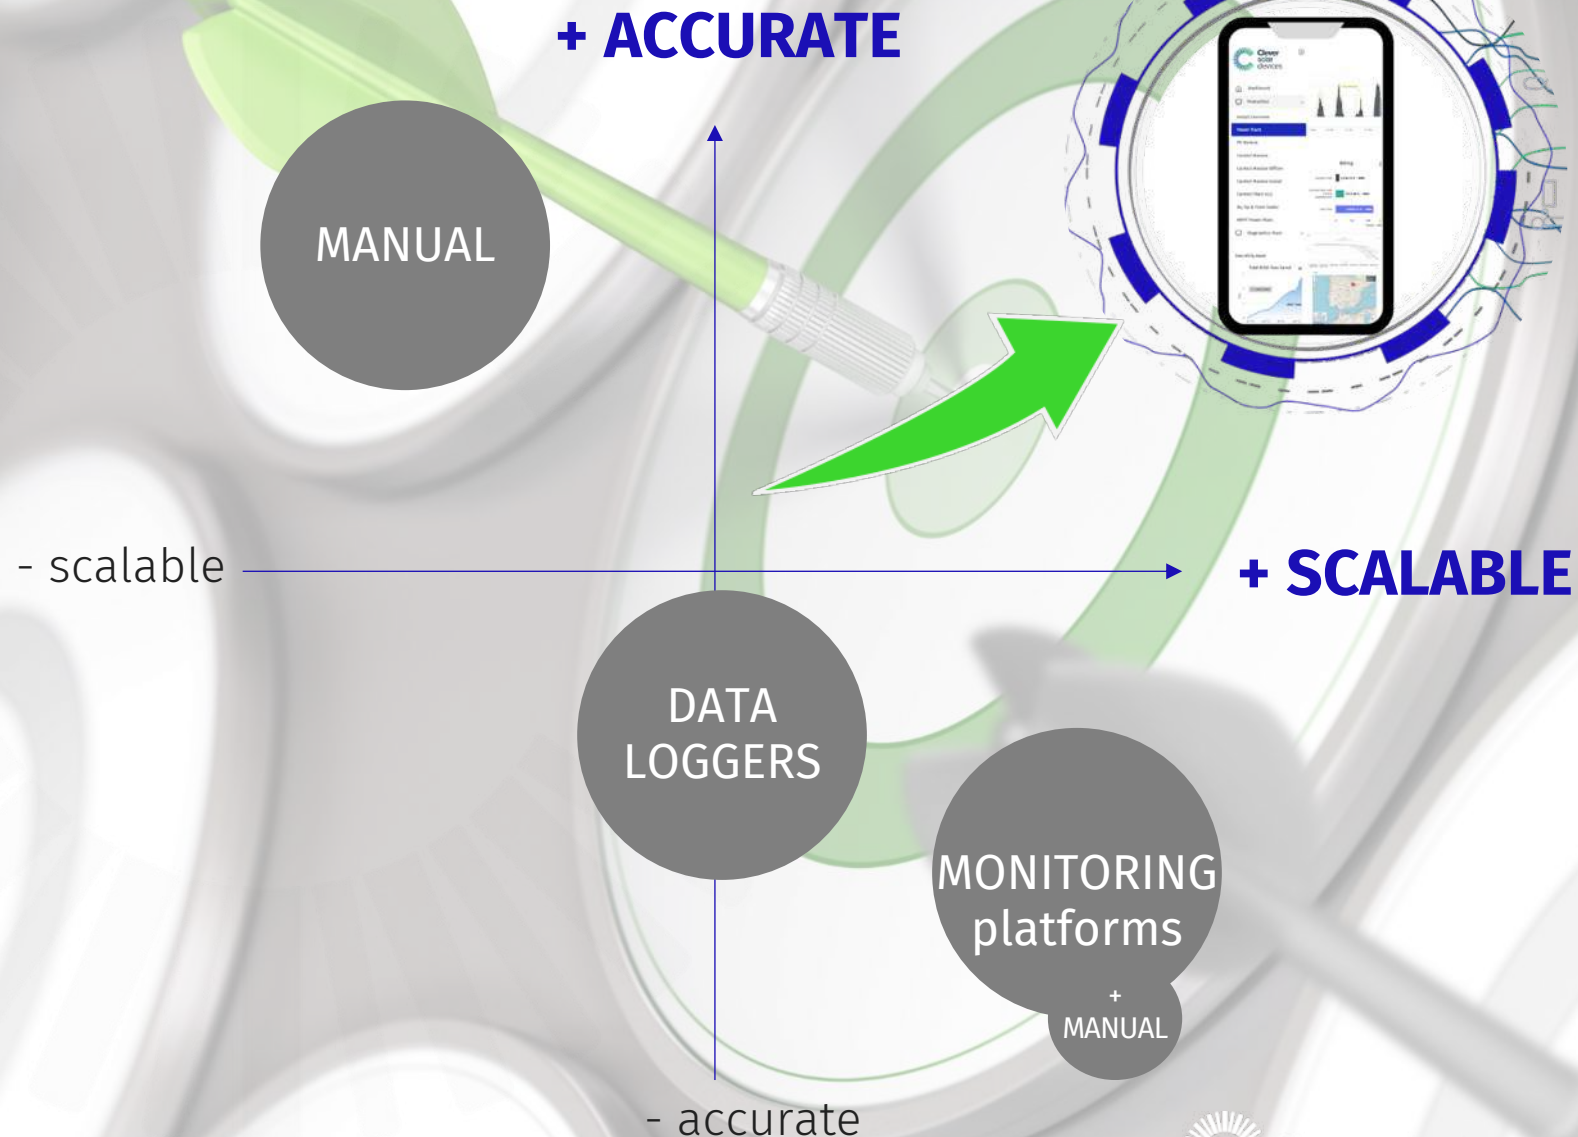

Our Unique Positioning

... filling the GAP

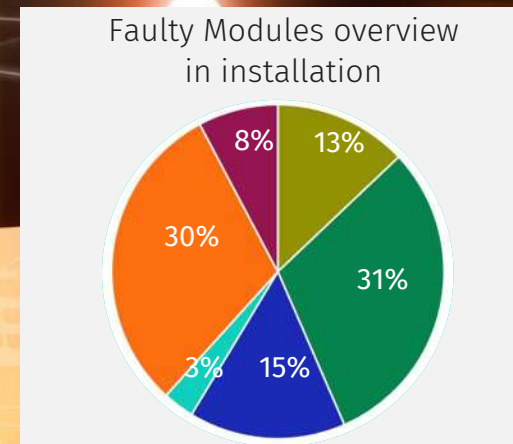

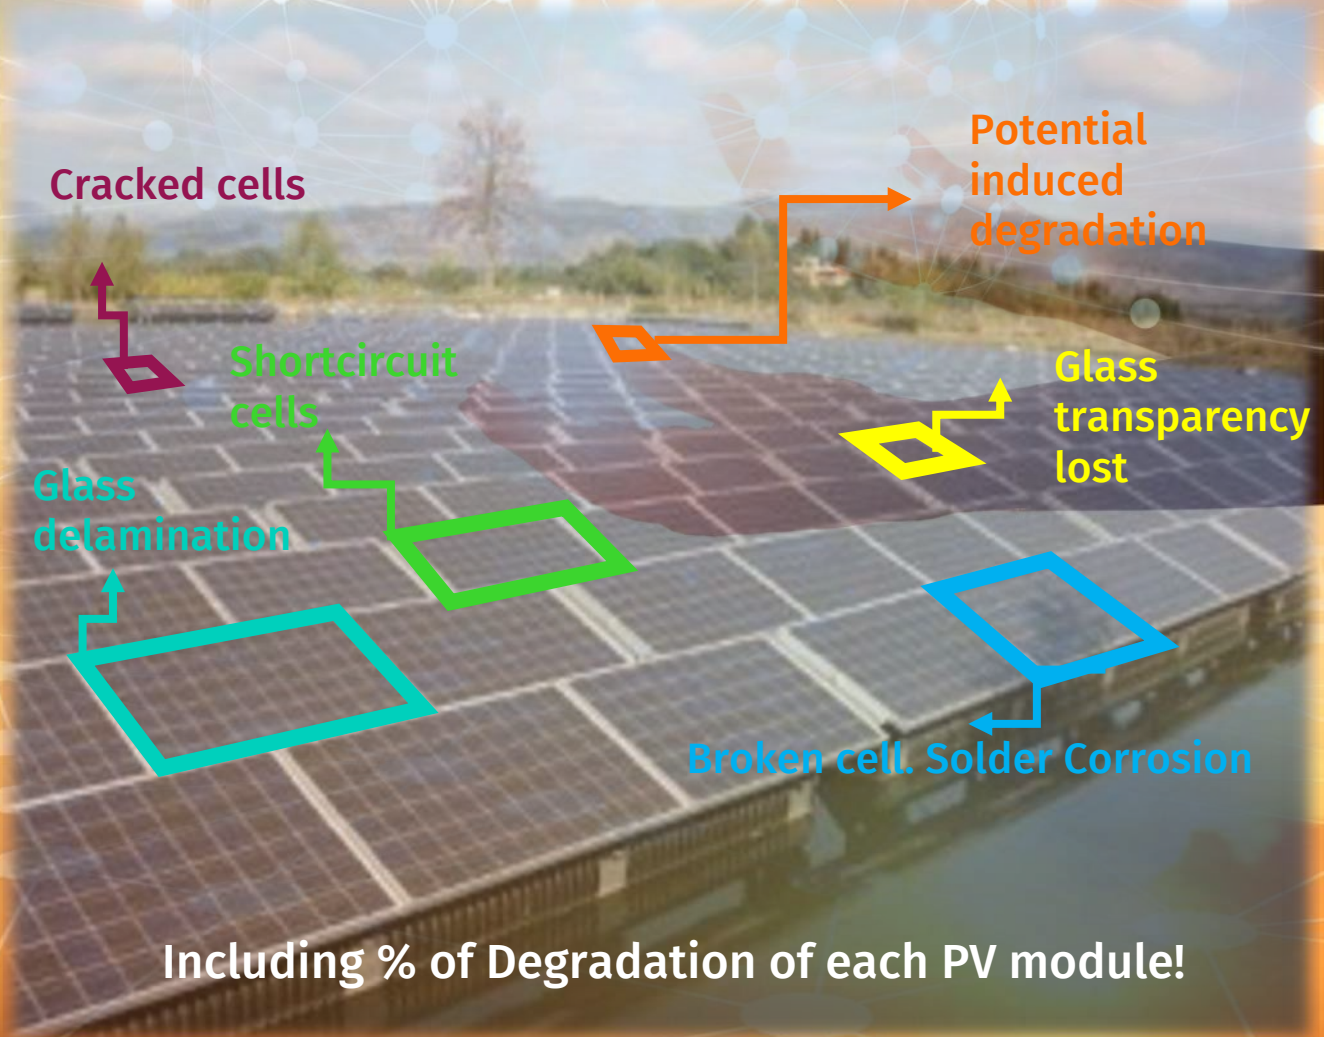

Our Photovoltaics 4.0 tells you **WHAT** and **WHERE**.

We **Diagnose** thru IV Curves at PV module level: the most **accurate data** for **PREDICTIVE** and **PREVENTIVE** maintenance and, the **best foundation** for a true PV Power Plant **Digital Twin**.

Our INNOVATION

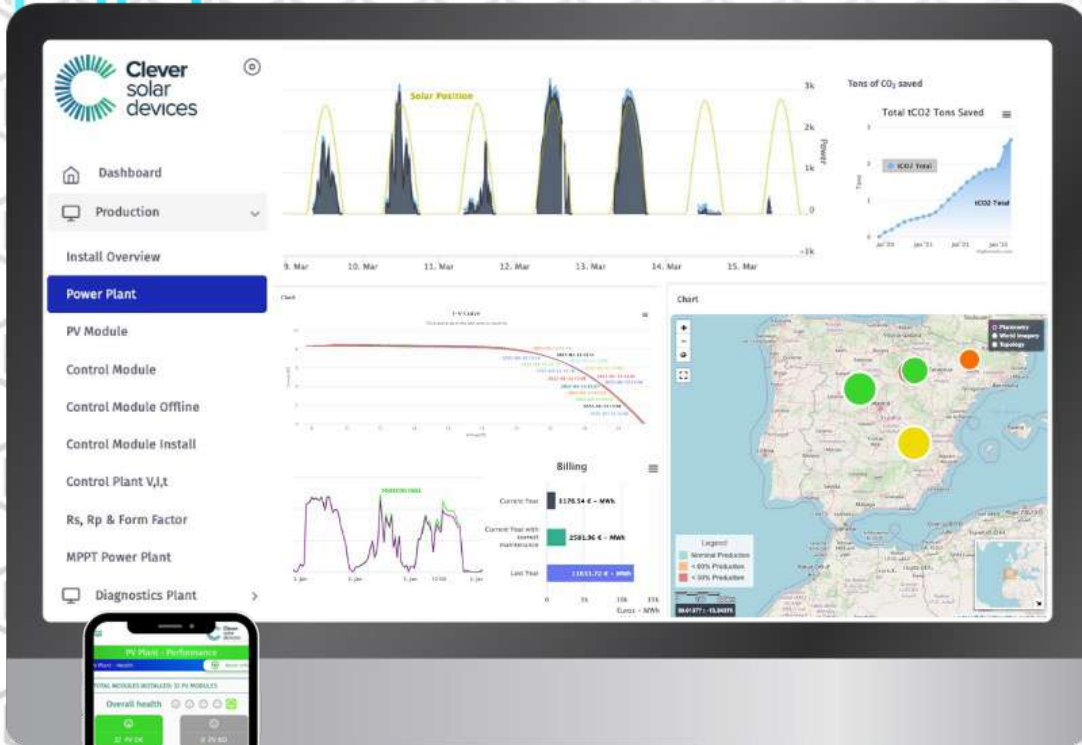

WHICH panels have issues, **WHERE** they are in the installation and **WHAT** is going on thanks to our **UNIQUE and PROPIETARY** algorithm

Including % of Degradation of each PV module!

Sourcing the BEST data out there

We measure the IV-Curve at PV module level

We are a **DIGANOSTIC** platform.

We don't estimate behavior like monitoring platforms. We **KNOW**.

Clever Dx is the **only platform** that measures **IV Curves**, which are the **best and more accurate data** to know the performance and health of a full PV Power plant.

Our Benefits

KNOW EXACTLY WHAT is happening to each module and WHICH And WHERE are the defective modules in the installation remotely.

Moreover, with the same number of production plants, **reduce Green Gas Emissions, up to 60 million tones per year globally.**

100%

Plant issues
detection

12%

Increase
Production

70%

Cost Reduction

Drastically

Reduce Labor
Risks

CO2 reduction: 60 million tones a year WW less GHG
12% more families with CLEAN Energy

Our Business Model: Software as a Service

As of today is a combination of HW and SaaS, planning in evolving into a pure SaaS.

SOFTWARE PLATFORM

(Price by volume depending on the number of devices)

RECURRENT REVENUE
SECURED BY OUR PATENTED
HARDWARE

HW

Investment
or
Leasing

We are a **global company**; we have the **intellectual** property that allows us the **Freedom to Operate** in **95%** of the installations worldwide.

Our Team of Innovators & Visionaries

Altogether more than **150 years** of experience in Tech Companies

Our TRACTION

5

BIG UTILITIES

Paying Customers

POC installations in:
Spain, Italy and Greece
Next steps: Expand the POCs
+ New installations in
Commercial&Industrial and
Residential.

NEW

PARTNERSHIP

Industrial Partnership

Partnership in the works to
penetrate industrial segment.

In conversations with PV
manufacturers for the “smart-
module”

AWARDS & GRANTS

Recognitions

Our solution is being recognized
both in the national international
Innovation and PV communities

Our Compromise

Our VALID, POSITIVE and SIGNIFICANT IMPACT has been validated by Impact Forecast organization

Our Positive Impact per year, of having 700.000 PV modules diagnosed with Clever Dx (1 PV power part of 280MW):

1.292

times driving a car around the world

4.392

EU households annual electricity

1.885

hot air balloons (2800 m³) of CO₂

10.546

passengers flying London-New York

20.297

barrels of oil burnt

2.090

elephants mass (5t) of CO₂

We contribute to 6 Sustainable Development Goals, helping improving operator's day to day, creating a more efficient energy system for everybody by digitalizing the PV industry, thru innovation and contributing reach the goals of Horizon 2030-50.
