

How can your business cut electricity costs?

The answer is **Sosimple**.

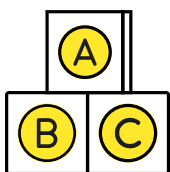

Sosimple is cheap.

Electricity costs are sky-high and rising. Cut your daytime power spending by 10%, 20% or more and save your business tens of thousands of Rands every year.

Our power is cheap because it's based on your actual usage and delivered directly from our solar installation on your roof.

Your savings start from Day 1 and will grow with every opportunity we find to save you more.

Sosimple is easy.

All you need is a business and a roof. We own the solar installation, so there's no investment, no maintenance and no service costs. Our contract has no hidden traps and no back-breaking penalties.

What we offer is a transparent ten-year agreement to provide you with electricity at a guaranteed low price, and at the end of the contract we'll pack up and go.

You'll still have service from Eskom or your municipality at night or during high demand, but our power protects your business from ongoing and unpredictable price hikes.

Cheap, clean energy. It's Sosimple.
